(54) Title: A METHOD AND SYSTEM FOR IMPLEMENTING THE COMMUNICATION SERVICE CHARGING

(54) 发明名称: 一种通信业务计费的实现方法及系统

- 1 CHARGING SYSTEM SIDE
2 CHARGING MODULE
3 ASSIGN TO THE FACTOR, AND OPERATE
4 RESULT
5 EXPRESSION ANALYZER
6 THE USER SIDE
7 EXPRESSION CONFIGURED BY USER

(57) Abstract: In a method for implementing the communication service charging, the charging system comprises a charging module and a expression analyzer. Firstly, the charging module determines a elementary expression factor, and the user configures the expression according to the gives expression factor; the charging module analyzes each expression factor after reading the communication record, and transmits each value of expression factor to the expression analyzer; the expression analyzer operates the expression according to the expression configured by the user, and the value of expression factor transmitted from the charging module, finally returns the result to the charging module, and the charging module searches the corresponding charging rate according to the result to operate the charging. The present invention makes it more agile and convenient to set the charging rule, and improves the expajndability of the program. It supports the new service requirement rapidly, unifies the description of the charging strategy and reduces the maintenance work.
